# Burrell Business Systems

Our retail point-of-sale solutions support single and multi-lane stores. With Burrell Business Systems, you are not buying consumer-grade hardware and miscellaneous software: You are buying a complete solution including retail-hardened hardware, specially tuned embedded Linux operating systems, POS software tailored to your specific needs, and support. As we are both the creators of this software and the company who supports it, we can completely customize it to your needs and fully support those needs. You need not worry about proprietary software, as L'âne is open source software. Additionally, the systems can be accessed and maintained from any modern computer system: Windows, Macintosh, or Linux.
